

Intelligent Evaporative Truck Cooling System

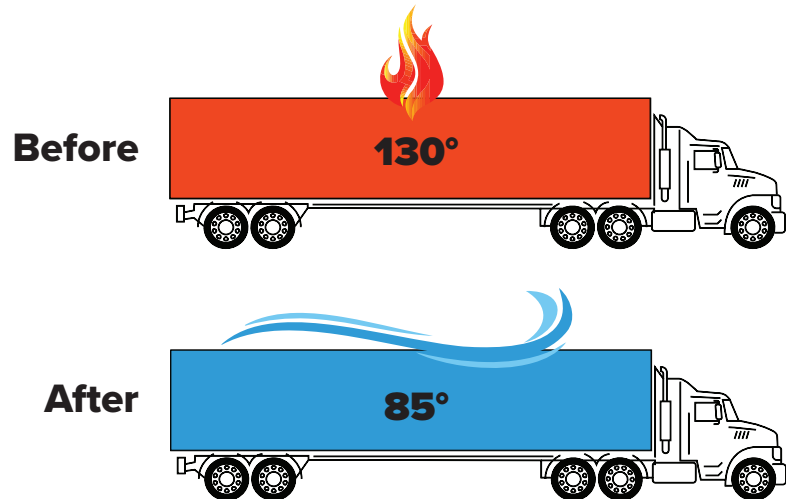

COMPLETE KIT

As the sun beats down, there can be tremendous heat buildup inside a truck trailer. Temperatures may increase to feel like an oven which can become dangerous when employees are loading and unloading goods. Trailers can reach up to 150°F, making these some of the hottest areas at any facility.

With Patterson's Intelligent Evaporative Truck Cooling System, you can eliminate that heat load on your trailer from the scorching roof.

One Kit
One Door

FEATURES

- **Evaporative cooling of a trailer:** cools by spraying water on a trailer roof at regular intervals to allow evaporation to occur and pull heat from a trailer to make a safer working environment for employees
- **All-in-one system:** just supply 24V AC power (typical sprinkler voltages) and water
- **Distance sensor:** to detect when trucks are present
- **Infrared temperature sensor:** to measure the temperature of a trailer roof
- **Water pressure sensor:** to eliminate the need for a master controller and system programming
- **Custom-designed brass nozzle:** to maximize trailer roof coverage (up to 53 ft)
- **Reliable, industrial brass valve and fittings**
