

All Patterson Fans and blowers are designed to be virtually maintenance free, but routine cleaning and inspection should be performed on a regular basis. Clean the fan of ALL dust, dirt and grease.

## **Routine cleaning will keep the fan operating safely at optimal performance levels.**

On an annual basis, we recommend that you inspect the following:

- Any unusual noise or vibration from the unit
- Tightness of the safety finger guards
- Tightness of bolts of mounting brackets
- Security of attachment to wall or other structural member
- Security of the safety chain (if applicable)
- Cord/electrical connections

If you find any problems as a result of routine inspection or have any questions about assembly or operating instructions, call a factory sales representative at 800-768-3985.

**For all parts, visit [www.pattersonfan.com](http://www.pattersonfan.com) or contact Patterson Fan Company, Inc. direct at 800-768-3985.**
